

Bollinger Motors implements Sibros Commercial Fleet Solutions to collect real-time vehicle data, minimize downtime and obtain remote access. By combining these pillars in a single modular and scalable solution, Sibros provides unparalleled control, visibility and governance over all embedded software and data across global fleets.

## Connected fleet vehicle solutions for OEMs

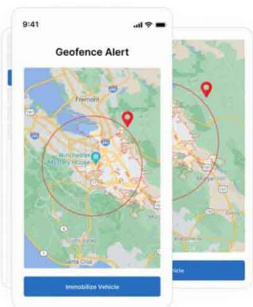

### Vehicle Wide Data Logging

Optimize fleet health by collecting, filtering, and transmitting a broad range of embedded signals from any ECU and sensor to provide deep actionable insights into product usage and performance with Deep Logger.

### Full Vehicle Software Updates

Send safe and secure software updates OTA to every ECU to fix code defects, reduce recall costs or upgrade vehicle functionality and performance anytime, anywhere with Deep Updater. The industry's only safety certified (ISO 26262 ASIL-D rated) software update management solution.

### Deep Remote Commands & Diagnostics

Streamline maintenance processes and enrich connected services by deploying secure remote user or diagnostic commands, for any vehicle ECU, to enable easy access and control with Deep Commander.
